

INTEGRATED POWER RESISTOR HEAT SINK

General Characteristics

- **Broad portfolio** of power resistors
- **Customizable cooling** solutions
- Optimized **combination** of **resistor** and **cooling technology** in one system for the **best-fit solution**
- **Heatsinks** with mounted **power resistors** covering a wide **thermal performance range** – from air-cooled to liquid-cooled and heat pipe assemblies

Advantages

- Faster **integration** by combined **Miba in-house expertise** in **both resistors** and **cooling systems**
- **Elimination** of assembly **process** at customer site – **ready-to-use** solution
- **Short time-to-market** by **combined process steps** within the **supply chain**
- **One-source** expertise – optimized cooling systems + resistors
